

Contact us!

We are looking for

- a joint venture with leading South African companies
- the fundamentals for a reference project and the market entry
- qualified employees for leading our business in South Africa
- contacts for developing our network

We want to encourage a new energy discourse in South Africa. We would be glad to give you references about our products and projects in Germany.

We are looking forward to meet you!

Design them with us:
Solar projects for South Africa

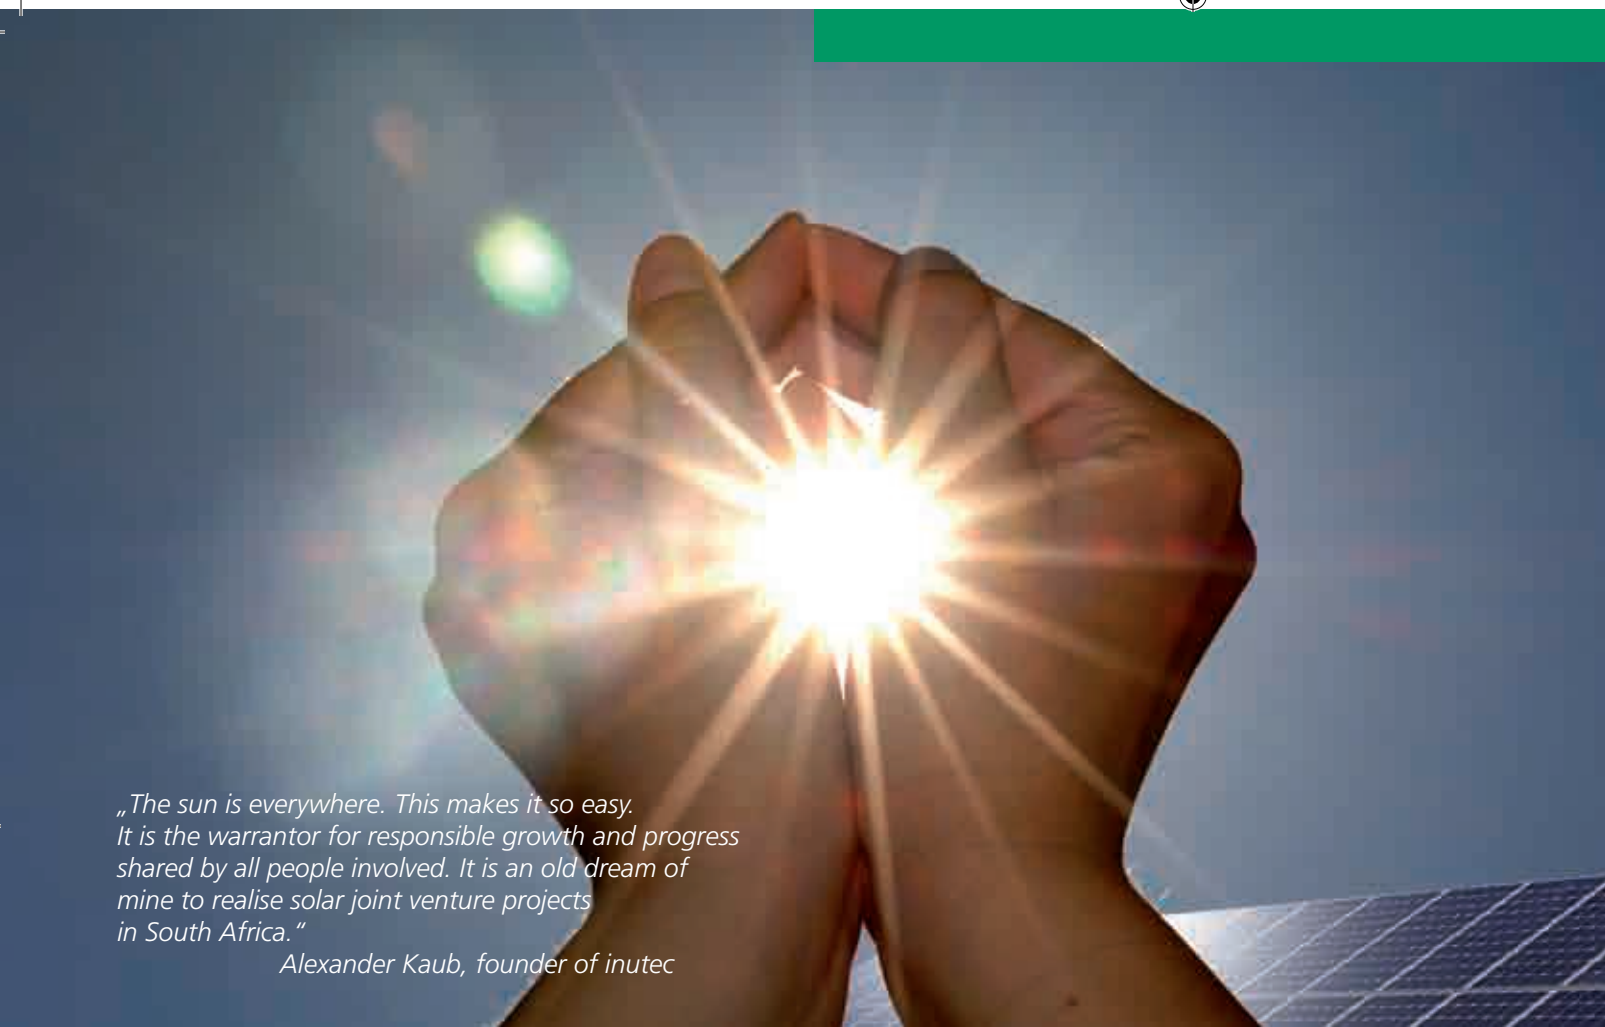

inutec solarzentrum

Paulsenplatz 7
22767 Hamburg

*„The sun is everywhere. This makes it so easy.
It is the warrantor for responsible growth and progress
shared by all people involved. It is an old dream of
mine to realise solar joint venture projects
in South Africa.“*

Alexander Kaub, founder of inutec

Innovative solar techniques made in Germany

inutec has been dedicated to alternative energies for the future since 1995. Today, our name stands for efficient, safe and long lasting solar energy plants generating electricity and heat.

We offer all performances required, from planning, over commerce up to the installation of regenerative energie products, from one hand. More than 30 enthusiastic employees are at the core of our success.

Recognise potentials – enforce projects

With our sound know-how and high quality standards, we work exclusively at solid energy projects. Our aim is to finance, build and operate solar energy parks with a promising future in South Africa with a producing range from 1 to 10 megawatt, giving the same technical standards and services as in Germany.

The first solar energy park - powered by inutec & partners

Leading technology is provided: inutec will employ advanced photovoltaics technology produced by the Solarpower company and the best power inverters available for the construction of this solar energy park. We are looking for a suitable terrain, also off-grid projects where required, and interested partners on site. We will pass on our know-how to the selected companies to guaranty for success in the creation and the operation of the plant.

Solar thermal power stations

We are projecting solar thermal power stations for a reliable water heating system and solar electricity supply for buildings. For each solar energy project, you can rely on more than 16 years' experience on our side.
